

## Who We Are

Is a leading construction, project management contractor, and specialized in steel structure, cladding and aluminum glazing. Our reputation for safety delivering quality projects on time and budget is well recognized in the industries we serve. We have proven expertise in managing large complex projects and strong relationship with our clients.

السادة عملائنا الكرام يشرفنا نحن شركة إبس للألمنيوم في تقديم افضل الخدماتنا فيما يتعلق بالمشاريع الخاصة بكم من حيث تقديم أفضل الحلول التقنية بمجال صناعة الألمنيوم والمعادن بكافة المجالات من حيث تصميم بروفيلات الألمنيوم و سحب قطاعات من أفضل شركات سحب الألمنيوم بالمملكة العربية السعودية و كذالك ينطبق على جميع المعادن حسب طلب مكاتب الأستشارية سواء من داخل المملكة أو من خارجها .. و نحن لدينا قسم تطوير المنتجات الألمنيوم و المعادن حتى يتم مواكبت التطوارات الدائمة في هاذا المجال. بالختام يسعدنا و يشرفنا خدمتكم

#### **What We Do**

EPS has been constructing projects. Steel structure and Cladding & Glazing for the construction industry.

Over a few years, we have developed and established good business relations with several private and governmental clients.

EPS specializes in the Steel structure. Aluminum Cladding, Structural Glazing. Curtain wall and all kinds of Storefornt Doors to better serve our clients we have acquired new technology that is capable of our business however, extends to other parts of Middle East.

#### Services

- 1. General Contracting
- 2. Steel Structure
- 3. Aluminum & Structural Glazing
- 4. Cladding Works

## **ALUMINIUM WINDOWS**

EPS has been constructing High quality aluminium windows.

#### Specifications:

Aluminium profile, thickness 2mm water and dust repellent with the possibility of installing an external roller shutter and ensuring that dust and air do not enter. Specializes in the all kinds of windows to better serve our clients we have acquired new technology that is capable of our business however, extends to other parts of Middle East.

## **ALUMINIUM WINDOWS**

## **ALUMINIUM DOORS**

EPS has been constructing High quality aluminium doors.

#### Specifications:

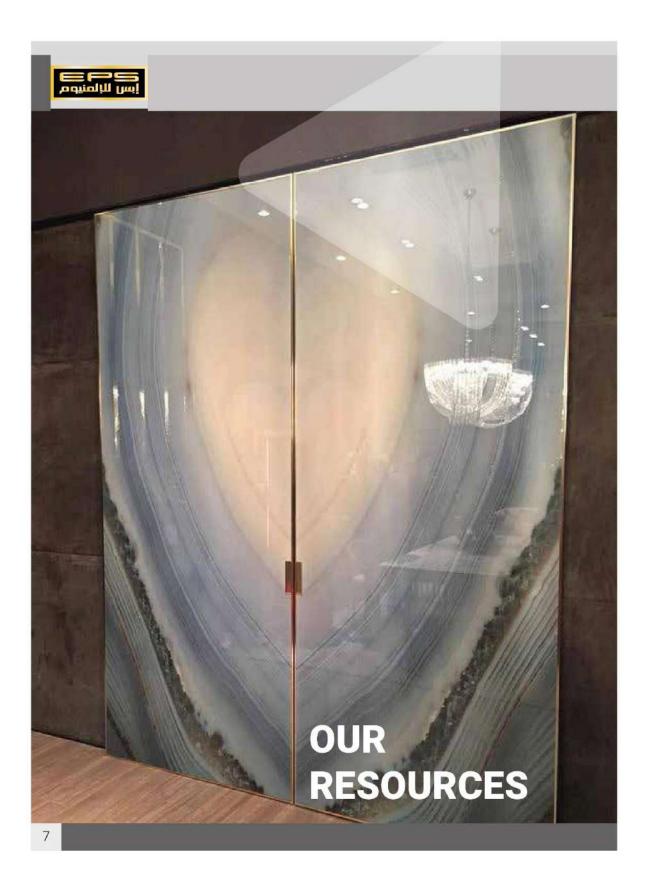

Aluminum doors of high quality and specification of EPS company from the outside a layer of HPL and from the inside. The filling is made of fire retardant PVC and water-resistant five-year quality guarantee Italian made accessories. The door lock is the same as the wood doors, with the possibility of installing a smart system. We also have a central lock for exterior doors. The possibility of installing glass in several forms that are resistant to breakage.

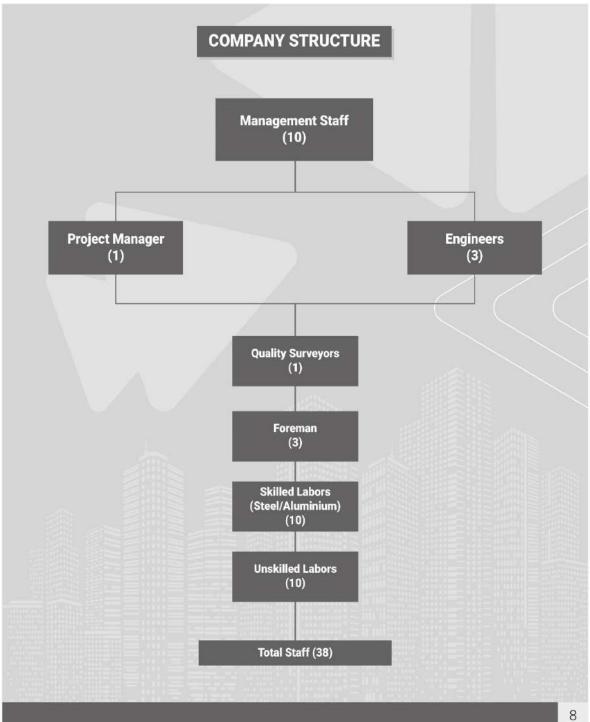

### LIST OF EQUIPMENT

EQUIPMENT	QUANTITY
Aluminum cutting saw	2
Automatic aluminum angle saw	1
CNC aluminum punching machine, 7m long	1
Manual aluminum cutting saw	2
Aluminum punching and milling press	1
Manual aluminum milling machine	3
Ordinary iron cutting saw	1
Aluminum bracket winding machine	1
CNC Wood and Aluminum Router Machine	1
CNC Wood Planing Machine	1
NC . Wood Punching Machine	1
NC . Blade and Wood Cutting Saw	1
Aluminum corner press machine	1
Grinding Machine	1
Micro Bus Nissan	1
Coaster Bus Nissan	1
Compressor	2
Hyndai dyna	1

#### COMPUTER AND EQUIPMENT LIST

### **Future Aluminium Profile LMX 650**

# LMX 650 ALUMINUM PROFILE PROCESSING CENTER

Machining and cutting line with down-feed blade Ø 650 mm and bar passage 300x300 mm

The machining unit LMX 650 tooled up with max 18 electrospindles and the cutting unit with infinite 360° blade rotation produce a continuous flow of processed and cut to measure elements. The additional machining module XMU carries out end milling (with blade, mill or mill units), boring and head tapping, as well as 45° and 135° inclined cuts, guaranteeing maximum flexibility for numerous applications. The high visibility cabin and the presence of the luminous FOM logo indicating the machine status are characteristic of the futuristic design of the system of LMX 650.

6 different variants are available, which can be configured in terms of length of material loading/unloading magazines and feed direction.

#### **OUR PARTNERS IN SUCCESS**

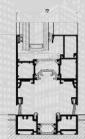

DOW CORNING

People are continuously looking for ways to maximize their space, as well visually as physically. The Concept Folding® 77 offers them the opportunity to optimize the utilization of their rooms, drawing the external environment into their homes. Next to the improved space utilization, this innovative system offers the advantage of loads of daylight coming in, as well as an aesthetical design. Another practical feature of CF 77 is the optional door locking principle which allows to use the first leaf as an entrance door without affecting the folding capacity of the system.

#### A WIDE RANGE OF SOLUTIONS

#### Innovative functional and technical features:

With CF 77, design and user friendliness go hand in hand with high technical performance. The standalone solution exists out of new profiles, accessories and insulation technologies that have specifically been designed for folding systems. It ensures high insulation values (Uf values down to 2,25 W/m 2K) that meet stringent local legislation requirements as well as market demands. Available in a number of configurations using between 2 and 8 door leaves, you can choose a design where the complete set of vents stacks to the same side, or split the design at any position, possibly integrating a central door solution.

#### Innovative functional and technical features:

- Highly thermally insulating
- Water resistance up to 600 Pa
- Glazing up to 63 mm
- 2 to 8 vent combinations
- Burglar resistant variant
- Large vent sizes
- High vent weights
- In and outward opening using the same profiles
- Window or door functionality for the first vent
- Integrated and centrally built-in bottom rolling system

	Max. vent size (mm)	Max. vent weight	Uw (W/m²K) *	Uf (W/m²K)	Visible width vent-vent sect
Reynaers CF 77	1200x3000	120 Kg.	down to 1,66	down to 2.25	144 mm
Reynaers CF -77SL	1200x3000	120 Kg.	down to 1,64	down to 2.31	122 mm
Reynaers CF -77AP	1200x3000	120 Kg.	down to 1,66	down to 2.25	144 mm
Reynaers CF -77SL/AP	1200x3000	120 Kg.	down to 1,64	down to 2.31	122 mm

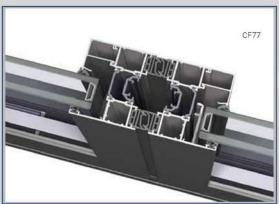

<sup>\*</sup> Ug: 1,1 W/m2K -4panel: 4000 x 2700 mm شرطة ابس الالمنبوم EPS Aluminum Co.

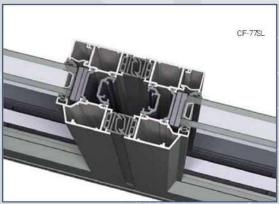

#### **DESIGN VARIANTS**

Next to the functional design, the CF 77 is supplemented with a Slim-Line variant, the CF -77SL, featuring a narrower visible width. Both designs are available in four different door sill solutions: High Performance, Double Weather Seal, Low Threshold and Flat Bottom Solution.

The High Performance option offers maximum performance in terms of air, wind and water resistance. The Double Weather Seal solution combines good air, wind and water resistance with decreased threshold and is well suited for renovation projects. The Low Threshold option offers a rise of only 18 mm and finally the Flat Bottom solution allows easy passage and maximum convenience for high traffic.

4 different threshold solutions meeting functional needs and performance levels:

			I ST			
		Flat	Low Threshold	Double Weather Seal	High Performance	
<b>3</b>	Air tightness	Not applicable	Class 2	Class 2	Up to Class 4	
<u></u>	Wind load resistance	Not applicable	Class B2	Class B2	Up to Class B3	
<b>(%)</b>	Burglar Proof*	RC2	RC2	RC2	RC2	
<b>3</b>	Water tightness	Not applicable	Class 4A (150 Pa)	Class5A (200 Pa)	Up to Class 9 A (600 Pa)	
		Optimal accessibility     Aesthetic bottom     solution     Economical solution	Easy passing     (18 mm threshold)     Bementary AWW rating     Weather Seal	- Double Weather Seal - Suitable for + renovation	High Performance     Double Weather Seal     different performance levels in one profile	

<sup>\*</sup>The burglar proof classification is in accordance with BNS31627

## ALUMINIUM COMPOSITE PANELS (ACP)

Currently, aluminum composite panel can be transformed in many ways. Among them are punching, which allows the creation of pointy-type shapes on the surface of the panel, creating drawings or forms; roller bending, to achieve curved shapes; CNC stamping and engraving to create reliefs; 3D shaping to project volumes on a flat surface, etc.

This transformation capacity of the aluminium composite panel gives it a plus of versatility in order to being used for constructing risky and creative designs.

It also makes it an ideal material to combine and make the areas of the facade which would be impossible with other kind of materials.

Beyond the usual picture of a ventilated flat facade, we see how the panel can be used for other more striking projects and risky designs that contribute to give a special character to the buildings.
